

Case Study – Leading Investment Bank, USA – Quality Assurance

Business Requirement –

ODA initiated a Quality Assurance engagement by forming a QA strategy that was geared towards reusing the test assets and performing an end to end QA test.

Process –

Successfully deployed our Business Process Testing (BPT) methodology as a foundation to reduce product innovation cycles from 24 months to 9 months! As a result, customers receive new products faster and the company's profitability and competitiveness have increased.

Automated more than ten thousand business rules through HP's QTP for web and mainframe based insurance applications.

Benefit's to the Client -

Using our UniRAD framework we managed the QA planning and QA execution phase for FIC, PLUS, Vantage & Lifepro applications for over 4 years. Core services provided by ODA under this engagement were:

- Provide overall QA test management and coordination.
- Perform manual QA testing of the application.
- Automate a subset of test cases during the QA testing timeline.
- Continue automation of the regression package beyond the QA testing timeline.
